

AutoVue 19.1 Paves the Way for Seamless 2D to 3D Migration

Collaborative Visualization for native EDA documents expanded

June 5, 2006

Cimmetry Systems Corporation, an Agile Software company, today announced the immediate availability of AutoVue version 19.1. Release 19.1 adds support for popular 3D formats prevalent in many industries including Architecture, Engineering and Construction (AEC), providing customers with the ability to view and collaborate on 2D and 3D drawings with a single solution.

AutoVue 19.1 expands EDA capabilities by adding NC Drill formats, Cadence Allegro and Concept 15.5, as well as OrCad Capture and Layout 10.5. Gerber file aperture support has also been enhanced. Printed Circuit Board manufacturers can collaborate with suppliers and customers more rapidly without risking valuable intellectual property.

A significant number of new format and product enhancements are included in this release, featuring: AutoCAD 3D 2000 and up, MicroStation 3D v8 and up, CATIA 5 R16, Solid Edge 18, enhanced product manufacturing information (PMI) support and much more.

As the AEC community embraces 3D technology, AutoVue provides a simple and pervasive means to view, print and comment on 2D and 3D drawings. AutoVue's native document viewing capability enables customers to instantly view documents without undergoing costly and error prone file conversions. This provides customers, suppliers, and partners with the ability to share information without having to purchase and manage costly software licenses and training services.

AutoVue 19.1 can be purchased from Cimmetry or through a global network of Value Added Resellers. For sales inquiries or to locate a local VAR visit our web site or call 1 514 735 3219.
