

## Filing Plus invests in Colortrac SmartLF 4080e large format scanner to reduce costs and improve turn-round time for clients

### The Filing Plus Group Plc

The Filing Plus Group Plc provides document scanning, relocation, archiving, consultancy services and record management solutions for a wide range of clients. Based in the financial heart of London, Filing Plus operate predominantly in the UK, though it has recently completed projects in both Frankfurt and Tokyo and is currently undertaking a series of projects across Europe. Now in its eighth year of business, Filing Plus has recently invested in a Colortrac SmartLF 4080e large format scanner supplied by Colortrac's UK distributor Allied Images and their Cambridge-based reseller Softcover International Limited.

### Integration with Kofax®

Ryan Heiser, IT Manager and IT Analyst at the Filing Plus Group, explains, "We could not justify the cost of a wide format scanner. We just did not have the volume. However, as demand increased and scanner prices fell, we felt that we should look

again." He continues, "We did our research and found that the Colortrac SmartLF met our needs. Not only that, but Colortrac was the only company that could supply a driver designed to meet the ISIS® Image and Scanner Interface Specification for an A0 Scanner. That meant we could integrate the scanner directly with our Kofax Ascent Capture® system."

#### Quicker turn-round for clients

Ryan points out, "We chose a SmartLF 4080e for colour and mono documents up to 44 inches wide." He adds, "Our clients now get a quick turn round. Any quality issues can be resolved immediately in-house and we can then send the corrected document by e-mail or CD to the client."

#### In a class of their own

Ryan found the whole experience with Colortrac and Softcover to be, "... great. The sales and after sales experience was painless and went smoothly. On this front they are in a class of their own. Colortrac's website was very informative and

Softcover even phoned me after installation to make sure we were happy." He adds, "We've had ours since August and we use it at least three days a week, sometimes more." Ryan is impressed and says, "The SmartLF is sturdy, nice looking, image quality is great and we expect it to pay for itself in just over a year." He concludes, "If you are looking at an entry level A0 scanner I would definitely recommend the SmartLF 4080e."

## Optional sentence for Softcover version

He adds, "We also bought Softcover's Scan2CAD raster to vector conversion software. Previously we could only supply our clients with raster image files, Now we can give them a better service by providing CAD drawings in Autodesk® DXF™ format."
