FOR IMMEDIATE RELEASE
17 September 2008

Motive Systems have released M-Files version 5.0

M-Files has again taken a giant leap in utilizing the document management system for many and varied areas of industry and types of company operations! The newest version of M-Files, release 5.0, includes many features that create daily benefits for each individual user and for the company as a whole through its comprehensive and coherent document management.

M-Files 5.0 contains a wealth of new features and usability improvements: new M-Files functions for Office and AutoCAD applications provide significant benefits in daily document-handling tasks. Versatile automatic functions make document managing more coherent, reduce the need for entering information in multiple locations, and facilitate finding the correct information. Further examples of new features include replication, common notifications, diverse protection settings, and compatibility with 64-bit Windows.

The new features include:

M-Files functions in Microsoft Office and AutoCAD: The new functions offered by M-Files speed up document-handling and increase the possibilities for using M-Files in many different applications.

Document metadata stored in M-Files can be included as a part in document contents. This function can be used to conveniently create document templates.

Automatic property values for documents and other objects: Automatic values increase the utility of document and object metadata in storing and searching for information. In addition, using automatic values reduces the need for redundant data entry. Automatic values are especially useful for naming documents and in automatically including metadata in document content.

Automatic naming of documents and other objects: Any property of the relevant class can be set as the name of the document. This function makes a company's naming of objects more consistent.

Expanded views and searches: Views and searches can also be created by using property relationships. New shortcuts from objects to other objects enhance accessibility and make searching for information linked with other information faster.

Common notifications: By using common notification rules, you can order e-mail notifications based on objects saved in M-Files to be sent to several users or user groups.

Diverse permission settings: User-specific rights and permissions can be specified for various functions and properties. The rights apply to the adding and editing of both objects and properties. Permissions can also be used to prevent or allow the visibility of various users and properties to certain users.

Replication: Replication makes accessing frequently used documents on client computers in geographically separate facilities much faster.

User groups can be imported and re-synchronized by organizational unit from **Active Directory**.

M-Files API: The improved M-Files API (programming interface) enables creating workstation-specific applications. Applications created by using the M-Files API are now also version-independent.

M-Files Web Access is more flexible than ever.

M-Files is compatible with both 32-bit and **64-bit Microsoft Windows** operating systems.

Notes for Editors:

About Allied Images Limited

Allied Images Limited has been established since 1989 and are Scanning and Imaging Technology Specialists offering a comprehensive range of products and services to an extensive market place including GIS, CAD, AEC, Reprographics, Copy Shops,

Bureaux and Manufacturing. Allied Images is committed to stay in the forefront of this continually expanding industry enabling it to satisfy users demands with the latest technology and training available. www.allied-images.com

About Motive Systems

Founded in 1989, Motive Systems is a developer of state of the art software applications. The company's early background in engineering and consulting provides an effective basis for understanding customers' real-world needs. This expertise has led to the development of M-Color and M-Files, the company's flagship products.

Motive Systems also offers document management consulting, as well as customized software development services. Motive Systems' future plans include growing its business into an internationally recognized developer of software products. In doing so, Motive is committed to maintaining the high quality of products and customer service that have earned the company the respect of its customers as a provider of quality CAD and document management software. www.motivesystems.com
