FOR IMMEDIATE RELEASE
19 November 2008

Allied Images has announced that Buckinghamshire New University, based in High Wycombe, is the first establishment to take advantage of our newly announced "scanner educational pricing". The university is the only publicly-funded higher education institution in Buckinghamshire and has faculties of Culture & Creativity, Enterprise & Innovation and Society & Health. The Colortrac SmartLF GxT 42e scanner package will be used in the faculty of Culture & Creativity that covers such areas as Design & Craft, Visual & Communication Arts and Music, Entertainment & Moving Image. The "scanner educational pricing" packages offer the opportunity for students, researchers and academics to gain experience of the latest scanner technologies. They are based on the highly acclaimed Colortrac SmartLF Ci 40, Cx 40 and Gx 42 large format document scanners. The educational scanning packages, which include hardware and software options worth at least £2,185 free of charge, are affordable by most faculties while offering complete industry-standard scan-to-file and scan-to-print solutions. Educational scanner packages are available now from Allied Images' resellers throughout the UK and Ireland.

Buckinghamshire New University vision is "to be a university that makes a significant social and economic contribution to the local region, while building a national reputation for our work and achieving international recognition for our specialist areas of expertise. As the only publicly-funded higher education institution in Buckinghamshire, we are proud to provide quality, inclusive and relevant higher education that develops and builds the potential of individuals and organisations alike. Within a caring and supportive environment, we deliver high-quality scholarship, as well as focused research and professional practice."

The Faculty of Creativity and Culture offers "courses that lead to careers across the whole of Arts, Media, Music and Entertainment, Design, Theatre and Film. All courses give you the opportunity to choose specialised options that suit your future career, and many of these allow you to mix disciplines in a way that

interests you. Design & Craft draws together programmes concerned with invention, systems, new products and the wider physically designed environment. It builds on its excellence in furniture design, production and research - arising out of High Wycombe's historical significance in the furniture industry, now extended to embrace disciplines including engineering, product, jewellery and metalwork, ceramics and glass, spatial interior and exhibition design.”

The packages consist of a scanner plus hardware and software options including, an upgrade from monochrome to express colour scanning, a choice of normal floor or universal repro stands, ScanWorks for scan to file and CopyWorks for copying software. These options, worth at least £2,185, are included free of charge. The top of the range SmartLF Gx 42 scanner also has a Motorised Thick Media option, worth £750, fitted which allows scanning originals mounted on board up to 0.8”/20mm thick. Delivery of all scanner packages is included in the price.

Allied Images is sole UK and Ireland distributor for Colortrac SmartLF scanners and has a network of premier accredited resellers – all of whom have dedicated demonstration facilities – and authorised resellers.

All our authorised resellers have access to our demonstration suite in our Northampton office. The educational scanner packages are available from all our resellers.

/Ends

Notes for Editors

ABOUT COLORTRAC

Founded in 1989 Colortrac Ltd is a dedicated manufacturer of large format scanners and scanning software based in St Ives, Cambridgeshire, UK, a region of British excellence in science and technology. As an acknowledged wide format innovator and industry leader, Colortrac can claim a number of notable "firsts", most importantly the development of the first large format colour scanner. Not bound by doctrine or technology, Colortrac was the first wide format scanner manufacturer to recognise the individual merits of CIS and CCD sensor technology. Colortrac use both technologies to provide practical solutions that meet the divergent needs of the Graphic Arts, AEC, CAD, GIS, EDM and FM technical documents scanning markets to best effect. The Colortrac range of SmartLF large format scanners, now in their fifth generation, excels in meeting the specific requirements of these markets while offering unrivalled price and performance benefits. Colortrac Ltd also has offices in Beijing & Suzhou in P.R. China and in Golden CO, USA.
