FOR IMMEDIATE RELEASE
08 August 2007

Motive Systems have released M-Files version 4.0.

Motive Systems has released M-Files version 4.0. Described by Antii Nivala, Motive's M-Files product manager, as "awesome" version 4.0 has a host of new features and improvements that will make M-Files the best of the new generation of document management system available for small and medium-sized enterprises.

M-Files version 4.0 sees the introduction of a new user interface with a modern layout in which: all necessary functions appear in clear menus in the task area, the search bar is always displayed, and it's possible to get a general view of the objects in thumbnails display mode.

Also, you can automatically archive your e-mails to M-Files Server, process them in M-Files without any limitations of the e-mail software, and link them to appropriate workflows. The workflows automate business processes where a document or task is passed from one participant to another for action. Increasingly electronic records are forming part of the information assets in organisations. It is now estimated that more than 60% of business communication is by email so it's effective management should be an integral part of any document management system.

Offline mode, where a portable computer user accesses a document without a connection to the M-Files Server, has been significantly upgraded allowing creation and editing of documents. When the portable computer is restored to the network M-Files synchronises the upgraded information with the server.

M-Files version 4.0 includes a host of other new features and enhancements including: nested views and groups views, search results grouped in sub-folders by various parameters, filtering by interdependent fields, centralized management of column and display settings, specifying the relationships by dragging, relationships between documents as meta data, more efficient operation of the XREF links, clearer layout of the M-Files Server Administrator. Also, M-Files is now compatible with Lotus Notes and Outlook Express.

M-Files is quick and easy to implement and does not require a costly customization project. M-Files gives you total control of all of your organization's documents, from small office documents to complex CAD drawings.
