

## VizImages by Dosch

As an M-Color User, you are no doubt aware that effective architectural visualization (commercial or residential objects) requires additional elements which help demonstrate relevant dimensions and proportions and which “add life” to the design. Such elements are, for example, people, cars, trees & plants.

The VizImages range by Dosch and promoted by Motive Systems is an effective way for adding such elements to your visualization. You can integrate the clip-maps directly into your M-Color drawings. The clip-maps are perfect “cut-outs”, and blend into their respective background and surrounding beautifully and naturally . They become part of the overall scene and do not look artificial or super-imposed. All images are available in the widespread, uncompressed TIF and the Photoshop PSD-formats.

The VizImages – People range consists of 4 options. The high-resolution images have a size of around 1000 x 2500 pixel per person.

1. **VizImages: People – Shopping & Travel** contains 77 different images of people with shopping bags, people standing in line, people reading the newspaper, travelers with luggage etc.

2. **VizImages: People – Business** contains 53 different images of people in an office or business situation – workers, clerical staff, people with a brief case, laptop or documents etc.

3. **VizImages: People – Hospital & Kids** contains 47 images of children and 30 images of hospital staff with or without patient interaction.

4. **VizImages: People – Private Life** contains images of 90 people enjoying their spare time in different everyday situations.

**VizImages: Cars** contains 8 different car-types viewed from 48 different perspectives. Audi A3, Audi A6, BMW 7-Series, Toyota Celica, Mercedes CLK, Lincoln Aviator, VW Passat and Porsche Cayenne are all provided in 8 "angle-pictures", each ranging from the same-level view to birds-eye view with 4 in-between level-views. Each high-resolution picture (a typical car in same-level view has a resolution of 1800 x 600 pixel) comes with the matching alpha-channel. Also provided for each car picture is a separate picture of just the shadow, cast by that car when standing in that particular position/perspective.

**VizImages: Trees** contains 150 cut-out trees in frontal view.

Each VizImages Selection is available on CD for only **£79.00** plus £8.00 delivery, excl. VAT. Additional user licences, without CD, are available for **£39.00** excl. VAT.

More samples are available on the Motive Website at [www.motivesys.com](http://www.motivesys.com).
